

FLUIT

ACTIU

FLUIT

Let it flow

Its design, inspired by the sails of a ship, is harmonious, light, and robust in equal measures, adaptable to any space ...

FLUIT, first collaboration with Archirivolto Design

Founded in 1983 in Colle di Val d'Elsa (Italy), Archirivolto Design is a collaboration between designers Marco Pocci and Claudio Dondoli. For over three decades, the studio has specialised in designing seating, from sofas to stools and chairs for workspaces and communal environments. Its designs use different materials, with a special emphasis on plastic.

WINDS OF CHANGE

OUR 100% RECYCLED CHAIR

Nuestra silla 100% reciclada

FLUIT is made from 100% recycled fibreglass and polypropylene plastic, certified by Green World Compounding®, that comes from the fruit and vegetable crates of Andalusia, the regions that make up what is known as the vegetable garden of Europe.

FLUIT is 100% sustainably manufactured and represents the consolidation of our sustainability policies.

Fluit's design is harmonious, light, and robust in equal measures, thanks to the innovative gas injection process.

Its delicate finish and soft touch awaken sensations thanks to a flowing design that unites the entire chair in one section, with no edges or joints.

AN EXTRA
INJECTION OF
RESISTANCE

What's more, using gas injection results in a robust and highly resistant product, making it one of the most stable chairs on the market, eliminating any sensation of wobbling.

Lightness is assured in all its versions: Fluit weighs between 4.5kg and a maximum of 5kg depending on the model (with or without armrests).

IN ANY
SPACE

FLUIT is a chair designed to adapt to any space. Its organic lines allow it to flow perfectly in different environments, and it has its own characteristics, such as UVI protection as standard, and it is super stackable (up to 20 units for the model without armrests), making it the perfect designer piece to equip indoor and outdoor spaces alike.

Wide range of combinations

FLUIT can also come with a padded cushion for a more ergonomic experience, as well as a wide range of colour combinations, textures and recycled materials to fit in with the personality of any space.

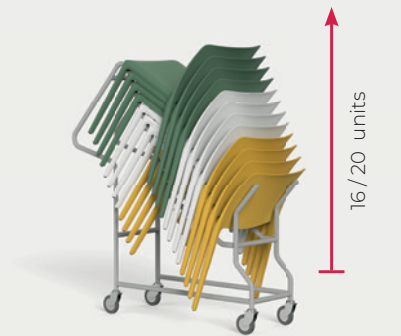

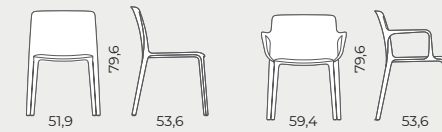

TECHNICAL FEATURES

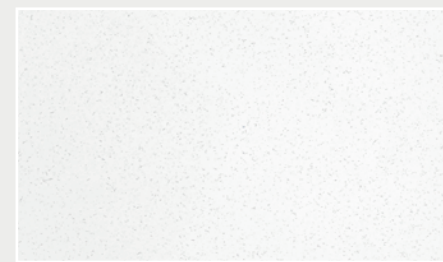

Información técnica

A 100% sustainable concept for a multifunctional solution, available with or without armrests to respond to different needs, also with the possibility of incorporating a padded cushion for greater ergonomics and, on top of this, a wide range of trendy colour combinations.
