sailor
collection

SAILOR

Sailor is a collection made of chair, barstool and lounge. All products of this line are stackable. Instead of the traditional rope braiding techniques for seating products, the design is inspired by fishermen nets, which are connected with the sun, beach and sea water.

The polyester nautical ropes and the steel frames are weather resistant, both in cold and hot season. We think to our world!

Sailor is a durable product and has low maintenance requirements, it's made from recyclable materials, which are produced by local manufacturers.

The growing environmental awareness, the consumption increasing, the escalation of raw material prices and their global shortages are increasing the demand for recyclable goods. A prerequisite for an ecological product is to be able to separate all its components from each other.

Sailor collection meets this requirement.

SAILOR

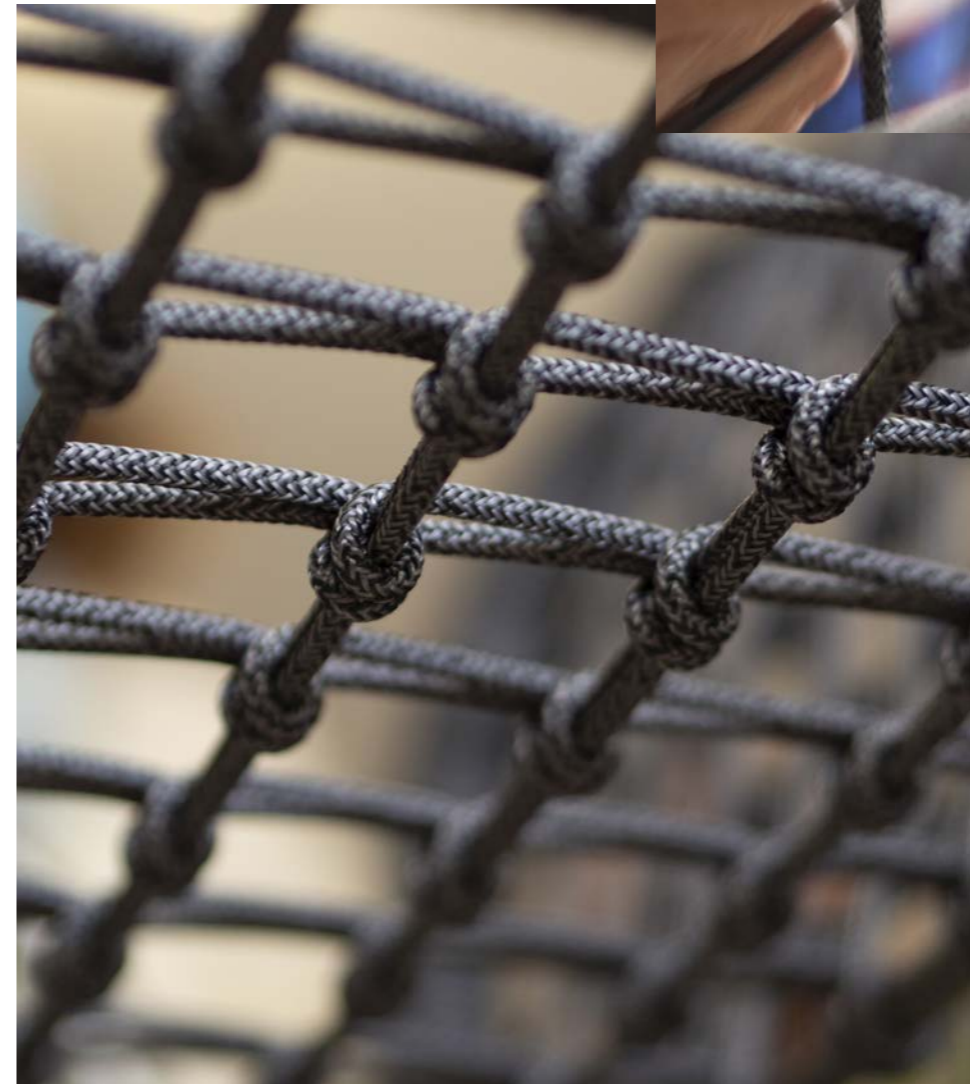

The structures of the sailor collection are produced in steel, powder coated, and their intertwining is entirely handmade by two people.

The nautical rope is a braid equipped with a core in PET HT and a memory insert while the external cover is in polyester. The High Tenacity Polyester dyed in paste, guarantees light fastness, low elongation, and a good resistance to atmospheric agents and abrasion.

It takes 60 minutes and 80 meters of nautical rope to weave a chair, while for a lounge 90 minutes of work and 130 meters of material are requested.

The manual skills, the creativity and the craftsmanship have created a design product with an excellent comfort.

Imagine a garden in full bloom and the spring sun softly warming your skin. Imagine yourself sitting in the sailor lounge, where the elasticity of the rope and the wraparound weave give the seat strength and comfort. Whether you are in your garden or outside a hotel, any place will become a little Eden, in which to indulge in total relaxation.

SAILOR_stool

165.41

The stool in the sailor collection could not be missing. Ideal for having an outdoor drink with friends or for enjoying a snack. It is in fact a seat which is well suited to become a practical and harmonious piece of furniture for the outdoors of a café or restaurant. But also for those who want to feel like at the bar (having an aperitif), in the comfort of their own home.

SAILOR collection - bleach-cleanable

The hygiene recommendations of the World Health Organization prescribe that all surfaces should be cleaned with a solution of water and 0.1% sodium hypochlorite (the solution is formulated by adding 50 ml of 5% household bleach in 2.5 liters of water). The mixture formulated fights bacteria and germs, guarantees maximum cleaning and ensures that clean surfaces are sanitized.

We have tested the material according to the WHO hygiene standards

The rope used for the SAILOR collection was tested for the resistance by the Catas test laboratory using the immersion method ISO 2812-1: 2017 in a solution of water and 0.1% sodium hypochlorite.

After four hours of immersion at a temperature of 23 +-2° C, no changes were detected on the surface of the material and in the color.
